# Version control

In computer software engineering, revision control is any kind of practice that tracks and provides control over changes to source code. Software developers sometimes use revision control software to maintain documentation and configuration files as well as source code.

## How can I send a whole .Net project as attachment via gmail?

Ask Question

9

★

1

I'm frequently working with students on their .Net coding assignments. I'd like to email the code to them when we're done. The easiest thing would be just to zip the project folder and send the whole thing, but gmail always strips out my attachments because they contain executables. Generally it's just the myproject.vshost.exe or something innocuous like that, but it's a pain to have to find an alternative upload location and then email the link to that. Has anyone been able to find a workaround that would allow me to send attachments like this via gmail?

I suspect the answer to this is "nope, it's not possible," but I'll ask anyway

[.net](#) [zip](#) [gmail](#) [executable](#)

3 I strip file extensions when I need to attach executables, for example Project1.zip becomes Project1 – [Novikov](#) Nov 3 '10 at 20:58

3 How about doing a Clean solution before zipping? – [Robert Jeppesen](#) Nov 3 '10 at 20:59

if its not a .zip it works, +1 to novikov – [DevelopingChris](#) Nov 3 '10 at 21:03

Not an immediate fix... But I had a prof setup a cvs repo that was used to hand in assignments. Today I suppose you might use git or hg. In any case it was the best homework submission setup I had experienced as a student. And everyone received some real vocational skills with source control. – [jason saldo](#) Nov 3 '10 at 21:07

1 Ermm ... *you don't?* You set up a repo of some sort ... – [svldgen](#) Apr 1 '13 at 20:29
